

## PRESS RELEASE

for Immediate Release

**FT. LAUDERDALE, Florida – March 3, 2009** - Dynalco, a Crane Co. company, announces a brand new SWT series of speed switches for the monitoring and protection of rotating and reciprocating machinery. The SWT series of speed switches are DIN rail mountable for easy installation and are fully isolated for compatibility with existing systems.

The SWT-2000, a 2 Channel Speed Switch/Transmitter, contains two isolated speed switches in one package. The SWT-2000 is able to monitor and protect two separate machines or processes simultaneously, with separate 4-20 mA proportional outputs. It also contains (4) relay setpoints and (2) open collector outputs with a variety of configuration options. Applications would include dual turbocharger protection and redundant protection for critical operations. Programming is done via an Ethernet connection.

The SWT-1000 Speed Switch/Transmitter has a single relay setpoint for over speed protection and provides 4-20mA isolated output. This product is configurable via Windows® software.

The SWTD-1000 Speed Switch/Transmitter has the same functionality as the SWT-1000 and includes an integrated backlit display. This product is software programmable and utilizes a 1/8 DIN package for easy installation.

The SW-100 is a DIN rail mountable speed switch that uses a single setpoint for over/underspeed protection. The SW-100 is simple to configure – no test equipment or computer is needed.

Dynalco has a reputation for providing rugged and dependable products for the oil and gas production, natural gas pipeline, marine, power generation and processing industry. The SWT series enhances the current Dynalco line of speed switches and transmitters, allowing a wide range of solutions for machine monitoring and protection.
